## SOLVING CHALLENGES IN 3D PRINTED PARTS IDENTIFICATION WITH SOFTWARE SOLUTIONS

Many manufacturers realize the potential of industrial 3D printing for end-use parts, but they find it difficult to fully utilize the advantages and capabilities of the technology.

In this workshop co-organised by **NAMIC and CASTOR**, supported by **Additive3D Asia and Stratasys**, learn to identify where, when, and how to use 3D printing to reduce costs and drive profitability through a panel discussion. CASTOR will also demonstrate the use of their software with real case studies and a demo session.

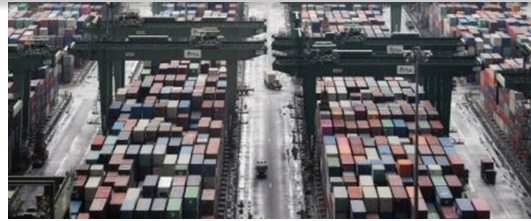

### ABOUT CASTOR

CASTOR's cloud-based or 'on-prem' software automatically analyzes the CAD file of each part within existing product design of discrete manufacturing to identify opportunities for using industrial 3D printing.
